From pollen to auto exhaust to ozone-destroying fluorocarbons to the technology behind coating microchips and building fiber optics, airborne particles affect the lives of everyone on the planet. The first edition of Hinds's Aerosol Technology appeared in 1982 when aerosol science was a relatively new field.

Aerosol-Based Technology for Synthesis of Nanoparticles Methods for production of nanoparticles can be classi- fied into four major groups: (1) aerosol processes, (2) va- por deposition on substrates, (3) precipitation of insoluble products resulting from chemical reactions in a solution; and (4) mechanical attrition of bulk materials.

Nanoparticle aerosol science and technology: an overview ...

Within the context of aeroponics, an aerosol is an ensemble of solid particles or liquid droplets suspended in a gas phase (Hinds, 1999). In nature, plants including epiphytic orchids and bromeliads absorb naturally occurring aerosols such as mist through leaves and aerial roots (Zotz & Winkler, 2013).
