Authors Cecie Starr, Christine A. Evers, and Lisa Starr partnered with the National Geographic Society to develop this Tenth Edition of **BIOLOGY: CONCEPTS AND APPLICATIONS**. Renowned for its clear writing style and unparalleled visuals, this trendsetting book applies exclusive National Geographic content to engage students and emphasize that biology is an ongoing endeavor carried out by a diverse community of scientists. Each chapter explores core concepts aligned with the American Association for the Advancement of Science (AAAS) initiative 'Vision and Change in Undergraduate Biology Education' to help students master associated learning objectives. By continuously challenging students to question what they read and to apply the concepts they learn, Starr and the accompanying MindTap hone critical thinking skills as students gain scientific literacy.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the

biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Known for its unique "Special Topic" chapters and emphasis on everyday health concerns, the Fifth Edition of *Biology of Humans: Concepts, Applications, and Issues* continues to personalize the study of human biology with a conversational writing style, stunning art, abundant applications, and tools to help you develop critical-thinking skills. The authors give you a practical and friendly introduction for understanding how their bodies work and for preparing them to navigate today's world of rapidly expanding—and shifting—health information. Each chapter now opens with new "Did You Know?" questions that pique your interest with intriguing and little-known facts about the topic that follows. The Fifth Edition also features a new "Special Topic" chapter (1a) titled "Becoming a Patient: A Major Decision," which discusses how to select a doctor and/or a hospital, how to research health conditions, and more.

This textbook will support graduate students with learning materials rich in the basic concepts of stem cell biology, in its most widespread and updated perspective. The chapters are conceived in a way for students to understand the meaning of pluripotency, the definition of embryonic stem cells and the

formation of multicellular structures such as organoids together with the underlying principles of their epigenetic. This textbook also discusses adult stem cells and the potential use of these cells, in particular neural, mesenchymal, and several types of muscular cells, in biomedical research and clinical applications. This textbook represents a vital complement to the text on Essential Current Concepts of Stem Cell Biology, also published in the Learning Materials in Biosciences textbook series.

Fred Van Dyke's new textbook, Conservation Biology: Foundations, Concepts, Applications, 2nd Edition, represents a major new text for anyone interested in conservation. Drawing on his vast experience, Van Dyke's organizational clarity and readable style make this book an invaluable resource for students in conservation around the globe. Presenting key information and well-selected examples, this student-friendly volume carefully integrates the science of conservation biology with its implications for ethics, law, policy and economics.

Organized to match sections of the text, this easy-to-use workbook invites and requires students' active participation, thereby deepening their understanding. Each chapter includes interactive exercises, self-quizzes, chapter objectives/review questions, and questions that ask students to integrate and apply key concepts.

Clear, engaging, and visual, BIOLOGY: CONCEPTS AND APPLICATIONS, 8e, International Edition equips non-biology majors with the science they'll need in life!
