Manual (9780716761259): Harris, Daniel C.: Books

This must-have student resource contains complete solutions to all end-of-chapter problems in *Genetics: Analysis of Genes and Genomes*, Eighth Edition, by Daniel L. Hartl and Maryellen Ruvolo, as well as a wealth of supplemental problems and exercises with full solutions, a complete chapter summary, and keyword section. The supplemental problems provided in this manual are designed as learning opportunities rather than exercises to be completed by rote. They are organized into chapters that parallel those of the main text, and all problems can be solved through application of the concepts and principles explained in *Genetics*, Eighth Edition.

The topics treated in this book are essentially those that a graduate student of physics or electrical engineering should be familiar with in classical electromagnetism. Each topic is analyzed in detail, and each new concept is explained with examples. The text is self-contained and oriented toward the student. It is concise and yet very detailed in mathematical calculations; the equations are explicitly derived, which is of

great help to students and allows them to concentrate more on the physics concepts, rather than spending too much time on mathematical derivations. The introduction of the theory of special relativity is always a challenge in teaching electromagnetism, and this topic is considered with particular care. The value of the book is increased by the inclusion of a large number of exercises.

The manual contains the solutions to every question in the book with additional and more detailed steps than in previous editions.

'Exploring Chemical Analysis' teaches students how to understand analytical results and how to use quantitative manipulations, preparing them for the problems they will encounter.
