PC Based Instrumentation and Control is a guide to implementing computer control, instrumentation and data acquisition using a standard PC and some of the most popular computer languages. Numerous examples of configurations and working circuits, as well as representative software, make this a practical, hands-on guide to implementing PC-based testing and calibration systems and increasing efficiency without compromising quality or reliability. Guidance is given on modifying the circuits and software routines to meet the reader’s specific needs. The third edition includes updated coverage of PC hardware and bus systems, a new chapter on virtual instruments and an introduction to programming and software development in a modern 32-bit environment. Additional examples have been included, with source code and executables available for download from the companion website www.key2control.com.

Presents information on getting the most out of a PC’s hardware and software, covering such topics as upgrading the BIOS, configuring the hard drive, installing more RAM, improving CPU performance, and adding COM ports.

Proceedings of the NATO Advanced Study Institute, SOGESTA, Urbino, Italy, July 9-20, 1984

A feckless boy is lured by a wicked magician into a trap but the scheme backfires – the boy, Aladdin, is left with a magical lamp and a genie who showers him with riches. Aladdin’s wealth makes him an attractive suitor for the sultan’s daughter, but when the evil sorcerer returns to kidnap the bride, the young hero must rescue his princess or die trying. This classic retelling of the ever-popular Middle Eastern folktale has entranced readers for over a century. Originally published in 1914 as part of Sinbad the Sailor and Other Stories from The Arabian Nights, this beautiful version by Laurence Housman features eight full-color images by Edmund Dulac, one of the era’s most famous illustrators.

An introduction to the study of philosophy with discussions on several topics including God, politics, science and art.
