Lorentz Dispersion Model Spectroscopic ellipsometry (SE) is

a technique based on the measurement of the relative

phase change of reflected and polarized light in order to

characterize thin film optical functions and other properties.

The measured data are used to describe a model where each

layer refers to a given material.

Lorentz Dispersion Model - Horiba

The classical dispersion model is based on the sum of the

single and double Lorentz, and Drude oscillators. • Lorentz

dispersion model The Lorentz classical theory (1878) is

based on the classical theory of interaction between light

and matter and is used to describe frequency dependent

polarization due to bound charge.

Note that the technical notes «Classical dispersion model» and «Lorentz dispersion model» are complementary to this one. Theoretical model Drude ' s model (1900) is based on the kinetic theory of electrons in a metal which assumes that the material has motionless positive ions and a non-interacting electron gas. This simple model uses classical mechanical theory of free electron. It was ...
