*The Low-Tech, No-Grow-Lights Approach to Abundant Harvest Year-Round Indoor Salad Gardening* offers good news: with nothing more than a cupboard and a windowsill, you can grow all the fresh salad greens you need for the winter months (or throughout the entire year) with no lights, no pumps, and no greenhouse. Longtime gardener Peter Burke was tired of the growing season ending with the first frost, but due to his busy work schedule and family life, didn't have the time or interest in high-input grow lights or greenhouses. Most techniques for growing what are commonly referred to as "microgreens" left him feeling overwhelmed and uninterested. There had to be a simpler way to grow greens for his family indoors. After some research and diligent experimenting, Burke discovered he was right—there was a way! And it was even easier than he ever could have hoped, and the greens more nutrient packed. He didn't even need a south-facing window, and he already had most of the needed supplies just sitting in his pantry. The result: healthy, homegrown salad greens at a fraction of the cost of buying them at the market. The secret: start them in the dark. Growing "Soil Sprouts"—Burke's own descriptive term for sprouted seeds grown in soil as opposed to in jars—employs a method that encourages a long stem without expansive roots, and provides delicious salad greens in just seven to ten days, way earlier than any other method, with much less work. Indeed, of all the ways to grow immature greens, this is the easiest and most productive technique. Forget about grow lights and heat lamps! This book is a revolutionary and inviting guide for both first-time and experienced gardeners in rural or urban environments. All you need is a windowsill or two. In fact, Burke has grown up to six pounds of greens per day using just the windowsills in his kitchen! *Year-Round Indoor Salad Gardening* offers detailed step-by-step instructions to mastering this method (hint: it's impossible not to succeed, it's so easy!), tools and accessories to have on hand, seeds and greens varieties, soil and compost, trays and planters, shelving, harvest and storage, recipes, scaling up to serve local markets, and much more.

*The Gardeners' Guide Book Growing and Harvesting Lettuce* will provide needed information for the gardener to plant, grow and harvest this delectable crop in the vegetable salad garden. Lettuce culture is not hard allowing the knowledgeable gardener to grow several varieties for colorful, delicious salads. salad, growing vegetables, varieties, culture

Elisabeth Arter gives advice on growing, preparing and presenting salads to maximum effect. She begins with the garden itself, showing you you do not have to be an experienced gardener nor to have a lot of space and with the aid of cloches, frames or a greenhouse, salads can be grown all year round. The book also includes advice on buying materials for salads, both fresh ingredients and dried fruit and nuts. There are brief details of the histories of salad plants and the food values they can provide.

Indoor Gardening spells out step-by-step instructions on how to grow all your salad greens all winter with no special equipment. Author Peter Burke says, "My greenhouse is a house full of greens". With nothing more than a cupboard and a windowsill you will harvest all the greens you need for a daily salad. Not just any salad, the soil-grown greens harvested in only 7 to 10 days make a tossed salad of lush, crispy greens with a variety of colors and textures. A gourmet treat every day. This book is a 'field tested' manual, the product of several years of presenting classes to first-time and experienced gardeners alike. Even kids can do this. The most common questions are addressed. For instance, "I don't have a sunny southern window, can I still do this?" Yes, absolutely. Any window will work. Another frequent question, "I have mold on my plants!" No, that fuzzy stuff is just root hairs growing from the stem. The Indoor Garden motto is "You can't mess this up" so give it a try. Indoor Gardening is perfect for localvores or the 100 Mile Diet, what could be more local than your windowsill? The nutrient-rich greens can be a welcome food source in the dead of winter; they'll put color in your cheeks! It works just as well in an apartment as a big homestead kitchen. Even a dorm room can be an indoor garden. The Bonus Section "Indoor Farming" explains how to make extra income using the same techniques as Indoor Gardening to grow greens for cash. The abundant greens are a great addition to a Farm Stand, Farmers Market or a CSA (Consumer Supported Agriculture) Share. The Daily Gardener Series: Volume I
